

1.2	LIFE SHARING NETWORK OVERVIEW
------------	--------------------------------------

The Life Sharing Network offers alternatives to staffed residential homes by providing an individual with living supports within the home of a non-related family. Support options consist of one of the following:

- > *Family Care Model:* The adult or youth lives with a family whether by occupying a bedroom and sharing communal space or by living in a self-contained suite within the family home.
- > *Modified Family Care Model 1:* The individual has their own apartment or home and BACI moves a family or roommate into the individual's place.
- > *Modified Family Care Model 2:* The adult or youth lives in an apartment next to a family. The family is responsible for assisting in the development of the individual's independent living skills.
